Patient Home Monitoring (PHM) is currently seeking an Anticoagulation trained nurse to remotely assist our clinic with dosing activities.

Job Summary

Assist the Dosing RN in providing telephonic monitoring services for PHM including but not limited to:

- Monitoring of drug therapy for patients with coagulation disorders and anticoagulation needs
- Developing and implementing a plan of care within the scope of established protocols
- Monitoring and adjusting dosing of warfarin in coordination with the medical director and patient's referring physician
- To complete all tasks in an organized, timely and efficient manner using sound clinical judgment consistent with clinical/academic background

Job Responsibilities

- Review patient information and medication use; adjust patient's warfarin therapy based on laboratory results, patient diet, compliance and drug interactions; and monitor patient compliance.
- Maintain a current knowledge of anticoagulation standards and adjust treatment regimens according to established protocols.
- Educate patients and family members on therapy.
- Utilize interpersonal skills and communication skills when communicating with patients, families and members of the care team.
- Maintain entries into the Warfarin database in real time.
- Communicate with referring provider regarding changes and concerns with anticoagulation medical management.

Education

- Graduate of an accredited program for licensed vocational/practical nurses
- Licensure/Certification/Registration: Licensed Practical/Vocational Nurse License required.

Required Experience

- Anticoagulation Therapy Management certification or equivalent experience.
- Minimum of one to 3 years of experience in a hospital or clinic setting.
- Anticoagulation management experience preferred.
