The B.A. degree program emphasizes the social sciences, with a basic introduction to physical and biological sciences applied to natural systems. Required courses emphasize social sciences and include breadth in natural sciences. Elective courses include social sciences applied to environmental analysis and policy, and permit some additional coursework in natural sciences.

Students should aim to follow the steps (marked priority #1, etc.) with the goal of completing (or at least enrolling in) all courses in a step before taking courses in the following steps. Remember that you also need to complete your G.E. requirements and that you can double-count 10 units for ES&P and your G.E.
