PLAN AHEAD - Don’t Miss this Workshop!!!

“A Head Start on Science” Summer Institute
California State University, Long Beach
June 20-24, 2016

This professional development institute will provide an exciting and stimulating full week of hands-on experiences designed to help you become more comfortable, confident, and capable as you engage young children in developmentally-appropriate science. Children who participate in science are eager to talk about, write about, and read about their real-world experiences; when we encourage and nurture their “sense of wonder,” we open the doors that help them meet today’s language and literacy goals & standards.

REGISTRATION FEE INCLUDES:
• A full week (5 full-time days) of training on the CSULB campus, provided by a team of enthusiastic professionals with years of experience working effectively with young children and their teachers
• Small class size to encourage interaction with staff and your fellow participants
• On-campus parking permit & first-day box lunches
• Coffee, water, and other light refreshments during daily snack times
• After-workshop online resources and interaction and continued assistance via email
• Opportunity to earn 2 units of CSULB credit (follow-up work & reporting required)

Each Participant receives:
• A personal copy of “A Head Start on Science: Encouraging a Sense of Wonder” - a teachers guide of science activities
• A set of “A Head Start on Science” instructional materials
• A copy of the “A Head Start on Science” Project DVD and tote bag
• About $100 worth of science equipment appropriate for exploring science with young learners

REGISTRATION FEE OF $650 INCLUDES ALL OF THE ABOVE!
The Head Start on Science Project at CSULB has been training Head Start and other teachers and administrators of young children since 1998, and participants unanimously applaud the scope, content, and quality of our workshops.
