Module I
Assessment and Intervention

Objectives:

1. Describe the components of Motivational Interviewing, including the Stages of Change and how these are utilized by the Nonspecialist.

2. Demonstrate, through role play, the skills needed for Motivational Interviewing.

3. Describe the difference between screening and assessment for substance abuse.

4. Describe several types of screening tools for both substance abuse and for determining the Stage of Change.

Stages Of Change Model
(Prochaska, DiClemente, & Norcross, 1992)

- Precontemplation
- Contemplation
- Preparation
- Action
- Maintenance
- Relapse
**FRAMES**

**Feedback**: Information about how drug/alcohol affects the client

**Responsibility**: Responsibility to change rests with the client

**Advice**: Give advice with care

**Menu of choices**: Therapists need to know about several different kinds of treatment

**Empathy**: Clients respond to warmth and understanding

**Self-efficacy**: The social worker should support the client by building self-efficacy to support the belief that the client can make the needed changes
Five General Principles of Motivational Interviewing
(Miller & Rollnick, 1991)

- Express empathy
- Develop discrepancy
- Avoid argumentation
- Roll with resistance
- Support self-efficacy

Handling Resistance

- Simple Reflection
- Amplified Reflection
- Double-Sided Reflection
- Shifting Focus
- Emphasizing Personal Choice and Control
- Reframing
- Paradox
Tools for Use by the Nonspecialist
Format for a Client Interview

Ask about substance use in detail. Then ask about:

- A typical day
- Lifestyle and stresses
- Health; substance use related to health
- The good things about using, then the not-so-good things
- Substance abuse in the past and now
- Client’s concerns directly and specifically
- The next step

T W E A K

- **T**: Tolerance – How many drinks can you hold?
- **W**: Have close friends or relatives Worried or complained about your drinking?
- **E**: Eye-Opener – Do you sometimes take a drink in the morning when you first get up?
- **A**: Amnesia – Has a friend or family member ever told you about things you said or did while drinking that you could not remember?
- **K** (C): Do you sometimes feel the need to Cut Down on your drinking?
The Four Ps
(Ewing, 1992)

- Do your Parents have an alcohol or drug problem?
- Does your Partner use alcohol or drugs?
- Have you had an alcohol or drug problem in the Past?
- Have you used any drugs, alcohol, or cigarettes during your Pregnancy?

Alcohol Use Disorders Identification Test (AUDIT)

Begin the AUDIT by saying: “Now I am going to ask you some questions about your use of alcoholic beverages during the past year.” Explain what is meant by alcoholic beverages (i.e. beer, wine, liquor [vodka, brandy, whiskey, etc.]). Circle the score for each question in the bracket on the right side of the question.

How often do you have a drink containing alcohol?

<table>

</tbody>
</table>
Have you or someone else been injured as the result of your drinking?

- Never [0]
- Less than monthly [1]
- Monthly [2]
- Weekly [3]
- Daily or almost daily [4]

Has a relative, friend, or a doctor or other health worker been concerned about your drinking or suggested you cut down?

- Never [0]
- Less than monthly [1]
- Monthly [2]
- Weekly [3]
- Daily or almost daily [4]

Record the total specific items. A score of 8 or greater may indicate the need for a more in-depth assessment.

---

**Module II**

**Treatment Models, Principles, Programs, and Program Components**

**Objectives:**

1. Describe the Patient Placement Criteria-2, including the Six Assessment Dimensions, and the Treatment Levels of Service

2. Demonstrate ability to use the Patient Placement Criteria-2, through the use of vignettes.

3. Describe two models of alcoholism/drug abuse and their implications for treatment, including the components of treatment.
The Six Dimensions for Assessment

- Acute Intoxication and/or Withdrawal Potential
- Biomedical Conditions and Complications
- Emotional/Behavioral Conditions and Complications
- Treatment Acceptance/Resistance
- Relapse/Continued Use Potential
- Recovery Environment

Levels of Service

**Level .05:** Early Intervention (For example, DUI classes, Opioid Maintenance Therapy)

**Level I:** Outpatient Treatment (Weekly therapy)

**Level II:** Intensive Outpatient/Partial Hospitalization Services

  - *Level II.1:* Intensive Outpatient Treatment (about 9 hours per week)
  - *Level II.5:* Partial Hospitalization Treatment (about 20 hours per week)
Levels of Service (continued)

**Level III:** Residential/Inpatient

*Level III.1:* Clinically managed, low intensity, residential

*Level III.3:* Clinically managed, medium

*Level III.5:* Clinically managed, high

*Level III.7:* Medically monitored, inpatient

**Level IV:** Medically managed/Inpatient

Goals of Treatment: Disease Model

- Problem recognition/commitment to abstinence
- Understanding loss of control
- Accept chemical dependency as a disease
- Believe in a higher power/accept help
- Identify with others in recovery
- Make a commitment to AA
Components of Treatment Programs: Disease Model

- Detoxification
- Biopsychosocial assessment
- Comprehensive treatment planning
- Drug testing
- Group/Individual therapy
- Family groups
- 12-step Attendance
- Case Management

Treatment Components: Social Learning (Neurobehavioral Model)

- Individual therapy on specific content
- Educational group
- Stabilization group
- Relapse prevention group
- Family group/marital therapy
- Drug testing
- AA meetings
Treatment Components: Women

- Medical treatment/reproductive health
- Abuse/assault counseling
- Counseling regarding shame, guilt, other treatment issues
- Social support skill training
- Parenting skills development
- Life skills development

Module III
Self-Help Groups, the Recovery Process, and Relapse Prevention

Objectives:

1. Describe the characteristics of self-help groups, including AA, Women for Sobriety, and Rational Recovery, and the role of social workers with these groups.

2. Describe the recovery process for both alcohol and drugs, factors that enhance the chances of recovery, how recovery impacts parenting, and implications for social workers.

3. Define relapse, and describe causes of relapse and two models of relapse prevention.
Developmental Model of Recovery

- Components
  - Role of alcohol
  - Environmental changes
  - Intra and interpersonal changes

- Stages
  - Drinking
  - Transition
  - Early
  - Ongoing

Process of Recovery

- Biopsychosocial crisis management
- Posttreatment restructuring
- Mature recovery
- Late recovery
Cocaine Recovery

• Withdrawal (0-15 days)
• The Honeymoon (16-45 days)
• The Wall (46-120 days)
• The Adjustment Stage (121-180 days)
• The Resolution Stage (181+ days)

Causes of Relapse

• Affective states
• Behavioral issues
• Cognitive variables
• Environment/Relationships
• Physiological variables
• Psychological issues
• Treatment-related variables
