“Psych Day” 2005 Keynote Address

Emotional Significance and Remembrance: How the Brain Does It

Dr. James L. McGaugh, UCI
Research Professor of Psychobiology and Pharmacology
Founding Director of Center for Neurobiology of Learning and Memory

Dr. McGaugh’s research focuses on the role of drugs and stress hormones in the formation of memory. His most recent work has examined the function of the amygdala in emotional memory, and the interaction of the amygdala with other brain regions. Dr. McGaugh’s 46-year illustrious career is marked by copious honors and over 500 publications, including his most recent book, Memory and Emotion (2003). For details, visit: http://www.cnlnm.uci.edu/mcgaugh.htm
